

**DID YOU KNOW?**

# **We've Upgraded**

**Milestone can now safely accept  
loads that used to be rejected.  
Got energy waste? Bring it on.**

**At Milestone, safety and compliance are our highest priorities. That means that, in the past, certain waste loads were not safe or suitable for our slurry injection facilities. Notice that we said, "in the past." Now you can bring a lot more loads to Milestone with confidence. Here's why.**

**Our priorities haven't changed.  
Our capabilities have.**

Milestone has enhanced its engineered processes to safely accept a much higher percentage of loads. These now include loads with cement or H<sub>2</sub>S contamination and loads above their lower explosive limit (LEL).

**We're your reliable go-to energy  
waste disposal partner.**

Bring your loads to Milestone and gain confidence knowing you'll receive reliable service, quick turnaround times, and the highest safety standards. Our facilities are built and operated with strict compliance and care, ensuring your waste is handled responsibly while your drivers experience smooth check-ins and efficient service. With Milestone, you can always expect safety, speed, and reliability every time.

**In the rare instance we can't accept  
a load, we still have options for you.**

Our injection facilities handle the broadest range of RCRA-exempt, non-hazardous slurries, especially now that we've enhanced our acceptance protocols. But if there's an occasional load that cannot be injected, we can still handle it for you. Our landfill facilities, often located nearby, are designed to the most stringent safety and environmental protection standards and can accept drill cuttings, soil, and other non-injectable loads.

Visit [milestone-es.com](https://www.milestone-es.com) for more information and talk to one of our waste management experts about your service quality challenges.

**“Our facilities are fast, safe,  
efficient, and reliable.  
You focus on production.  
We'll handle the waste.”**
